WORK EXPERIENCE

Bitpanda 2021–Present Senior Engineering Manager, BITPANDA — Barcelona
Currently managing 4 teams in the Product area of Onboarding and Marketing technologies, responsible of hiring and growing the teams within the Barcelona Tech HUB. Tech stack is PHP, Java, Golang and Angular, Swift and Kotlin for client applications. Extracting domain based services away from the current monolith and ensuring the scalability and reliability of the systems. In charge of 4 teams of approximately 7-8 members each.

Inditex 2020–2021 Principal Software Engineer (Logistics), INDITEX — Barcelona
In charge of the digital transformation of the Logistics branch of INDITEX with the main goal of moving the infrastucture of the platform from an "on premise" infractucture to a Cloud Native approach. Tech stack was Java application and custom libraries developed in-house. Infrastucture runs on top of Microsoft Azure Cloud and the migration consisted in a 2 step phase first moving all the infra/platform to a K8s cluster in Red hat Openshift cluster and after consolidation of the process move to the Azure Cloud. In charge of 2 teams of approximately 8-10 members each.

Dow Jones 2019–2020 Lead Software Developer, DOW JONES — Barcelona, Remote
Lead Software Developer in charge of the Data Pipelines to process the historical archive of news from TWSJ (The Wall street Journal) that serves several of the REST APIs provided by the Dow Jones DNA initiative. Tech stack is scala, python and Angular for client applications everything running in Google Cloud Computing.

Stuart Delivery 2019–2020 Lead Platform Engineer, STUART DELIVERY — Barcelona, Remote
Working on the Platform Team in the area of Spatial Technologies. Leading and growing the team from 4 Engineers to 14 Engineers and responsible of Architectural decisions as well as Roadmap definition for technical tasks. Tech stack is scala, python (for Data Science related tasks) and Ruby on Rails for API based services.

Stuart Delivery 2019–2020 Senior Data Engineer, STUART DELIVERY — Barcelona
Joined as Senior Data Engineer to work in the Spatial area of Stuart Tech. In charge of the service that provides the platform the functionality of Rider/Package assignment. Originally the service was built following a monolithic approach and presented some issues related to scalability and performance. Designed a plan to split the service in several micro-services that were able to scale. Tech stack is scala, python and Ruby on Rails and communication between services was powered by Kafka.

2015–2018 Data Engineer, XING NETWORKING — Barcelona

XING Networking
- Spain

Joined the Data Engineering, making the switch from QA Engineering to Software Development in the area of Data Engineering. Worked in the Search Engine of the platform driven by an Elasticsearch cluster and several services that provided indexing capabilities (near real time) and a service providing a DSL to interact with the Elasticsearch cluster.

2014–2015 Senior Software Test Engineer, XING
NETWORKING — Barcelona

XING Networking
- Spain

As a Software Test Engineer I'm in charge of designing, maintaining and performing all related tasks to Testing in the project I'm working on. We are using Ruby on Rails as a backend framework and Backbone-Marionette as a main Front-end framework. The testing is done both manually and automatically using Jenkins as a CI. The Frameworks used for testing in our project are: RSpec, Capybara and Jasmine for the Javascript test suite.

2012–2013 Senior QA Engineer, WUAKI.TV — Barcelona

Wuaki.tv

VOD service on-line available in multiple devices. As a QA Engineer I'm in charge of developing and maintaining the automated test suite built with RSpec and Capybara for the Web Site and in Jasmine for the TV devices. One of our main goals has been to improve the execution time of our test suite by reducing it almost a 30% . Another task our dept. has done is to improve and increase the release frequency (from once per month to twice per week) through the usage of different environments where to test the isolated feature, without the concerns of an integration environment, in that way we can ensure the value of the feature and let the integration tests do their job.

2011–2012 QA Engineer, KINAMIK DATA INTEGRITY S.L —
Barcelona

Kinamik Data
Integrity S.L

Working as a QA Engineer and a 3/4 Tier Support Engineer. Designing and Maintaining Test Plans/Suites, executing these test plans and providing support to our customers. Worked with Java and JBoss, and HSM technologies as well.

2010 – 2011 Technical Manager, AVERY BERKEL ESP —
Barcelona

Avery Berkel Spain

Leading the technical team for Spain and Portugal. I've worked for almost 6 months in Birmingham, where the company HQ were placed, providing support and developing integration projects with our customers.
